

Day – 01

Learning Excel: Exploring the Basics and Key Functions

I've recently started learning Excel and wanted to share my journey and progress. In this post, I'll outline the core topics I've explored so far:

- **Excel Interface:** Familiarizing myself with the workbook, worksheet, and spreadsheet models, and understanding how to navigate between different cells and sheets.
- **Active Cell and Cell References:** Gaining insights into the concept of the active cell and how to properly use relative and absolute cell references.
- **Basic Operators:** Experimenting with essential mathematical operators like addition (+), subtraction (-), multiplication (*), division (/), and exponentiation (^).
- **Working with Columns and Rows:** Learning to resize column widths and use the autofill function to speed up data entry and analysis.
- **Printing and Formulas:** Understanding how to print spreadsheets, as well as working with and displaying formulas in cells.
- **Naming Cells and Ranges:** Using named ranges to make my formulas clearer and more manageable.
- **Common Functions:** Exploring functions such as SUM, AVERAGE, MAX, MIN, COUNT, COUNTIF, and COUNTA to analyze data.
- **Advanced Functions:** Using INT and ROUND to handle numerical precision.
- **Using the Function Icon:** Discovering alternative ways to insert functions with the helpful Function Icon.
